Let's Get Started

What Is NotebookLM

NotebookLM is Google's AI-powered research assistant that answers questions using only your uploaded documents.

Adding Knowledge Sources

Supported Sources

PDF

Portable Document
Format files

PPT

PowerPoint
presentation files

Google Docs

Documents created
in Google Docs

Websites

Content from online
web pages

Copy & Paste

Notes added via
copy and paste

Analysing Pdfs With Notebooklm

Google NotebookLM can turn lengthy PDF documents into an **interactive knowledge source**. Instead of reading an entire PDF manually, you can upload it and ask questions directly based on its content.

Key capabilities

Extract insights

Extract insights, concepts, facts, and important findings.

Compare information

Compare information across multiple PDFs.

Generate content

Generate study notes, FAQs, timelines, and outlines.

Ask questions

Ask questions and get answers grounded in the document.

Summarize PDFs

Summarize lengthy PDFs into key points.

Find information

Find specific information quickly using natural-language questions.

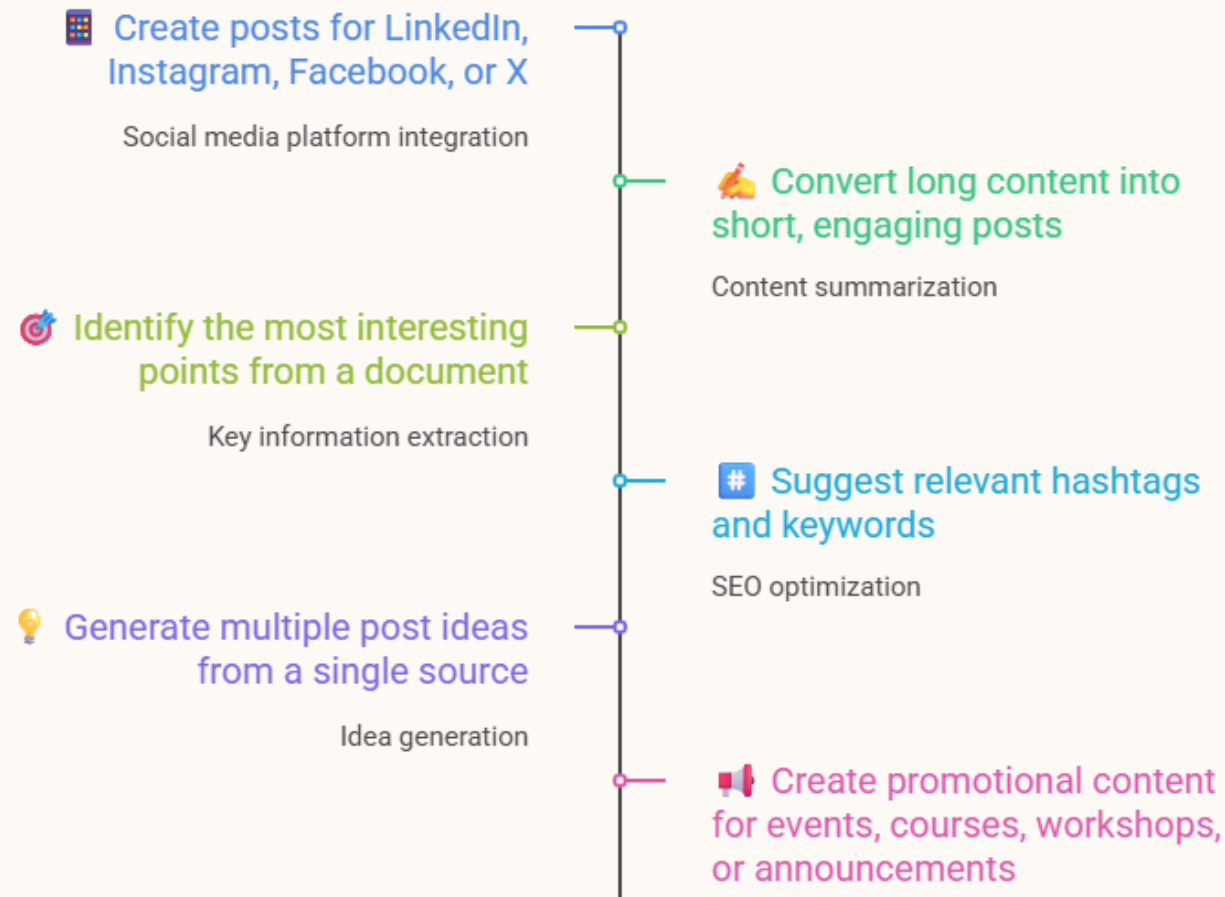

Trace answers

Trace answers back to the source for easier verification.

Generating Social Media Posts

NotebookLM can help transform your **documents, newsletters, reports, or research content into engaging social media posts**. Instead of creating content from scratch, you can provide your source material and ask NotebookLM to adapt the key ideas for different platforms.

Summarizing A Newsletter With Notebooklm

NotebookLM can quickly transform a **long newsletter** into a **concise summary**, helping you understand the most important updates without reading every section.

Conclusions

NotebookLM is a powerful AI-powered research and learning assistant that helps users **understand, analyse, summarize, and interact with their own documents**. It can turn PDFs, notes, reports, newsletters, and other sources into useful insights and actionable content.

Key Takeaways:

- 📖 Understand lengthy documents quickly
- 🔍 Ask questions and find relevant information
- 📝 Generate summaries, notes, and reports
- 💡 Extract insights and important ideas
- 📱 Convert information into social media content
- 🎯 Support learning, research, and productivity

Overall:

NotebookLM helps users move from “*reading information*” to “*interacting with and using information effectively*.”

Quick Questions

- 1) What is the main purpose of NotebookLM?
- 2) What is the difference between NotebookLM and a normal chatbot?
- 3) What happens when you upload multiple sources to NotebookLM?
- 4) Can NotebookLM help you compare two documents?
- 5) How can you verify whether an answer is supported by your source?
- 6) Can NotebookLM generate study notes from your sources?
- 7) What can you do with a newsletter using NotebookLM?
- 8) Can NotebookLM help generate social media post ideas?
- 9) Can you use NotebookLM to find important dates from a document?
- 10) Can NotebookLM work with more than one source at the same time?
